DETAILED ACTION

Summary

On October 23, 2006, a restriction requirement was sent to the Applicant. On November 21, 2006, the Applicant responded by electing group II, claims 39-46 without traverse.

Election/Restrictions

The Applicant has elected group II, claims 39-46 without traverse. Claims 20 and 38 have been withdrawn from consideration.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 39-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lupien (6,012,046) in view of Kohls (7,020,632)

Lupien discloses the invention substantially as claimed, as set forth in the previous Office Action; however, Lupien does not disclose allocating the debt instrument in the time stamp order. Kohls teaches a method and corresponding system for trading contracts comprising allocation based on time-stamp order (col.4, lines 38-45). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate allocation based on time-stamp order as taught by Kohls into the invention disclosed by Lupien, to provide a means of ordering the components.

Response to Arguments

Applicant's arguments with respect to claims 39-46 have been considered but are moot in view of the new ground(s) of rejection.
